Cervical cancer is the second most common cause of cancer death in women in the United States. The medical prevention of cervical cancer is enhanced when there is an accurate history of screening and when the cervical smear is adequate. The utility of a prospective study of the incidence of cervical cancer in older women and the consistency of Pap test results are unknown. This study used a prospective design to evaluate the consistency of Pap smear results in older women. The analysis was performed by using data from the Women's Health Initiative Observational Study (WHI-OS). A total of 15,566 women ages 55 to 79 enrolled in the WHI-OS between

Cerebrospinal fluid (CSF) becomes increasingly the primary diagnostic test in recognition of the worldwide burden of neurodegenerative diseases (ND), including Alzheimer's disease (AD), dementia with Lewy bodies (DLB), Parkinson's disease (PD) and their common dementia endophenotypes,

such as AD and PD. The \*Lancet\* journal will not usually accept review or comment articles about clinical tests. However, the CSF field has experienced an explosion of research interest, as reflected by a recent review article by Martín-Martín et al. (2014) \[@CR1\] that also highlights the need for coordinated international consensus efforts. The paper also recognizes the need for re-definition of disease subtypes in cases for which the conventional (or currently defined) diagnostic criteria criteria do not apply \[@CR2\]. This recent paper also reflects a trend of \*Lancet\* toward expansion of the 'medical' section

---

\[@CR3\] towards a broader scope for review articles, including a proposal for an expanded text review format (with a more general introduction and focus on the clinical aspects of a disease), backed up by a review by Rector et al. (2015) \[@CR4\]. Reflecting the need for CSF in the diagnostic armamentarium of ND, the discovery and identification of CSF biomarkers for these disorders has expanded the range of CSF tests that are used as diagnostic or prognostic tools for diagnosis, prognosis or treatment of these diseases. In this volume we include a clinical laboratory perspective of the diagnostic value of CSF

biomarkers for ND, and we provide a perspective from pathologists on the role of CSF biomarkers in the diagnosis of AD in brain autopsies. The issue also includes several other important papers addressing emerging CSF biomarkers. These articles cover technical aspects of novel biochemical assays and/or diagnostic approaches for AD and PD. Particularly important is the review article by Mormède et al. (2015) \[[@f678ea9f9e
